

Software-as-a-Service Checklist

Need Help Deciding Whether SaaS is Right for You?

When business solutions are based on the traditional client-server model, the initial investment and ongoing costs of software, hardware, and IT personnel can be substantial.

Use this checklist as a starting point when thinking through the potential expenses associated with licensing software instead of accessing it through a subscription-based SaaS environment.

We have been providing software-as-a-service for more than 10 years. We're ready to answer any questions you may have about lowering operating costs and gaining flexibility, security, and resources as you transition to a hosted business solution.
